

Timetabling and space management consultants

The consultancy is widely regarded as a leading authority on space management, timetabling and course planning issues. It has made a major contribution to developing the methodologies used to support the preparation of successful property strategies.

The consultancy offers authoritative advice:

- space planning strategies have been developed for higher education based on the financial circumstances of institutions. It is an approach that has proved highly effective. Property strategies may address the distinctive needs of individual colleges and universities without the need to adopt standardised space norms or prescriptive guidelines for the sector;
- assisting further education colleges seeking to prepare strategic plans on the basis of current guidelines have created highly effective developments. Stellae is an approved consultancy which is compatible with current agency guidelines. Colleges may contact us confident of our proven ability to provide them, and their consultants, with specialist support.

The expertise of the consultancy team places it in a unique position to offer advice and guidance that takes into account the rapid changes impacting on course design and delivery methods. A highly dynamic relationship links course provision and space resources. Study programmes evolve to reflect economic, social and cultural changes. Course delivery methods are altering rapidly as computer based communications make possible innovative study programmes. The type of teaching facilities required to meet the needs of staff and students are evolving at an unprecedented rate.

The space modelling system that is used by the consultancy has been developed with government and funding agency support. It is designed specifically to meet the needs of colleges and universities. Adapting, extending or replacing part or all of a college or university is a mission critical process. The modelling systems minimise the risks by linking planned property strategies with workable timetables and target space efficiency levels.

Our aim is to ensure institutions of further and higher education have the means to operate as dynamic centres of learning and research, responsive to the changing needs of staff, students and their wider communities.
